22	1	Scope 1
23	2	Normative references 1
24	3	Terms, definitions, symbols and abbreviated terms 1
25	3.1	Terms and definitions..... 1
26	3.2	Abbreviated terms..... 2
27	4	Document conventions and organization 2
28	4.1	Conventions 2
29	4.2	Notation..... 2
30	5	Theory of Operation 3
31	5.1	Interworking Approach 3
32	5.2	General 3
33	5.2.1	Value Assignment..... 3
34	5.2.2	Property Naming..... 4
35	5.2.3	Range 4
36	5.2.4	Arrays 4
37	5.2.5	Default Mapping 4
38	5.2.6	Conditional Mapping 4
39	5.2.7	Method Invocation 4
40	6	EnOcean Translation..... 4
41	6.1	Operational Scenarios..... 4
42	6.1.1	Use case for EnOcean Bridging 5
43	6.2	Requirements specific to EnOcean Bridging Function 5
44	6.2.1	Introduction 5
45	6.2.2	Exposing EnOcean Devices to OCF Clients..... 6
46	6.2.3	Protocol Translation between EnOcean and OCF 11
47	7	Device Type Mapping 12
48	7.1	Introduction 12
49	7.2	EnOcean Equipment Profiles to OCF Device Types and OCF Resource Types..... 13
50	7.3	Telegram Parameters 14
51	7.3.1	Push Button..... 14
52	7.3.2	Rocker 1 st Action 14
53	7.3.3	Key Card 14
54	7.3.4	Alert Signals..... 14
55	7.3.5	Open/Closed 14
56	7.3.6	Temperature..... 14
57	7.3.7	Barometer 14
58	7.3.8	Illumination..... 14
59	7.3.9	Humidity 15
60	7.3.10	PIR/Occupancy..... 15
61	7.4	Indirect Parameters through EnOcean Equipment Profile 15

76	8.4.1	Derived model	17
77	8.4.2	Property definition	17
78	8.4.3	Derived model definition	18
79	8.5	Light Sensor EEP A5-06-01	18
80	8.5.1	Derived model	18
81	8.5.2	Property definition	18
82	8.5.3	Derived model definition	19
83	8.6	Light Sensor EEP A5-06-02	19
84	8.6.1	Derived model	19
85	8.6.2	Property definition	19
86	8.6.3	Derived model definition	20
87	8.7	Light Sensor EEP A5-06-03	20
88	8.7.1	Derived model	20
89	8.7.2	Property definition	20
90	8.7.3	Derived model definition	21
91	8.8	Light Sensor EEP A5-06-04	21
92	8.8.1	Derived model	21
93	8.8.2	Property definition	21
94	8.8.3	Derived model definition	21
95	8.9	Light Sensor EEP A5-06-05	22
96	8.9.1	Derived model	22
97	8.9.2	Property definition	22
98	8.9.3	Derived model definition	22
99	8.10	Light, Temperature and Occupancy Sensor EEP A5-08-01	23
100	8.10.1	Derived model	23
101	8.10.2	Property definition	23
102	8.10.3	Derived model definition	23
103	8.11	Light, Temperature and Occupancy Sensor EEP A5-08-02	24
104	8.11.1	Derived model	24
105	8.11.2	Property definition	25
106	8.11.3	Derived model definition	25
107	8.12	Light, Temperature and Occupancy Sensor EEP A5-08-03	26

108	8.12.1	Derived model	26
109	8.12.2	Property definition	26
110	8.12.3	Derived model definition	27
111	8.13	Liquid Leakage Detector (Water) EEP F6-05-01	28
112	8.13.1	Derived model	28
113	8.13.2	Property definition	28
114	8.13.3	Derived model definition	28
115	8.14	Occupancy Sensor EEP A5-07-01	29
116	8.14.1	Derived model	29
117	8.14.2	Property definition	29
118	8.14.3	Derived model definition	29
119	8.15	Occupancy Sensor EEP A5-07-02	30
120	8.15.1	Derived model	30
121	8.15.2	Property definition	30
122	8.15.3	Derived model definition	30
123	8.16	Occupancy Sensor EEP A5-07-03	31
124	8.16.1	Derived model	31
125	8.16.2	Property definition	31
126	8.16.3	Derived model definition	31
127	8.17	Push Button, EEP F6-01-01	32
128	8.17.1	Derived model	32
129	8.17.2	Property definition	32
130	8.17.3	Derived model definition	32
131	8.18	Rocker Switch, 2 Rocker EEP F6-02-01	33
132	8.18.1	Derived model	33
133	8.18.2	Property definition	33
134	8.18.3	Derived model definition	33
135	8.19	Rocker Switch, 2 Rocker EEP F6-02-02	34

3 Terms, definitions, symbols and abbreviated terms

3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 30118-1:2019, ISO/IEC 30118-2:2019, and ISO/IEC 30118-3:2019 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

436 – ISO Online browsing platform: available at <https://www.iso.org/obp>

437 – IEC Electropedia: available at <http://www.electropedia.org/>

438 **3.1.1 EnOcean Device**

439 A Device with Sensors and/or Actuators which communicates over ERP and uses a well-defined
440 EEP.

441 **3.1.2 EnOcean Shadow Device**

442 A virtual copy of an EnOcean Device which contains the last values that have been sent over ERP
443 from the actual EnOcean Device.

444 **3.1.3 EnOcean Bridge Platform**

445 A Platform which contains an ERP Transceiver and can communicate over various OCF relevant
446 protocols. It implements the EnOcean Bridging Function and the EnOcean Shadow Device List
447 which translates well-defined EnOcean Devices to Virtual OCF Servers.

448 **3.1.4 EnOcean Telegram**

449 Telegram which can be send over ERP and contains different Parameters. It contains the byte-
450 representation of actual values, a RORG and an Identifier. It may contain Teach-In Information.

451 **3.1.5 EnOcean Teach-In Information**

452 Contains an EEP of a real device to identify the type.

453 **3.1.6 EnOcean Transceiver**

454 Hardware to communicate bi-directional in the ERP.

455 **3.2 Abbreviated terms**

456 **3.2.1 ERP**

457 EnOcean Radio Protocol
458 Protocol for Sending/Receiving EnOcean Telegrams

459 **3.2.2 EEP**

460 EnOcean Equipment Profile
461 A specific Type for an EnOcean Device, which contains semantic and syntactic information of the
462 EnOcean Device.

463 **3.2.3 RORG**

464 Radio-Telegram types are grouped ORGAnizationally
465 Type of an EnOcean Telegram, which also indicates it size and byte-structure.

466 **4 Document conventions and organization**

467 **4.1 Conventions**

468 In this document a number of terms, conditions, mechanisms, sequences, parameters, events,
469 states, or similar terms are printed with the first letter of each word in uppercase and the rest
470 lowercase (e.g., Network Architecture). Any lowercase uses of these words have the normal
471 technical English meaning.

472 **4.2 Notation**

473 In this document, features are described as required, recommended, allowed or DEPRECATED as
474 follows:

475 Required (or shall or mandatory).

These basic features shall be implemented to comply with the Mapping Specification. The phrases "shall not", and "PROHIBITED" indicate behavior that is prohibited, i.e. that if performed means the implementation is not in compliance.

Recommended (or should).

These features add functionality supported by the Mapping Specification and should be implemented. Recommended features take advantage of the capabilities the Mapping Specification, usually without imposing major increase of complexity. Notice that for compliance testing, if a recommended feature is implemented, it shall meet the specified requirements to be in compliance with these guidelines. Some recommended features could become requirements in the future. The phrase "should not" indicates behavior that is permitted but not recommended.

Allowed (or allowed).

These features are neither required nor recommended by the Mapping Specification, but if the feature is implemented, it shall meet the specified requirements to be in compliance with these guidelines.

Conditionally allowed (CA)

The definition or behaviour depends on a condition. If the specified condition is met, then the definition or behaviour is allowed, otherwise it is not allowed.

Conditionally required (CR)

The definition or behaviour depends on a condition. If the specified condition is met, then the definition or behaviour is required. Otherwise the definition or behaviour is allowed as default unless specifically defined as not allowed.

DEPRECATED

Although these features are still described in this document, they should not be implemented except for backward compatibility. The occurrence of a deprecated feature during operation of an implementation compliant with the current document has no effect on the implementation's operation and does not produce any error conditions. Backward compatibility may require that a feature is implemented and functions as specified but it shall never be used by implementations compliant with this document.

Strings that are to be taken literally are enclosed in "double quotes".

Words that are emphasized are printed in *italic*.

5 Theory of Operation

5.1 Interworking Approach

The interworking between EnOcean Devices and OCF defined Devices and Resources is modelled using the derived model syntax described in Derived Models for Interoperability between IoT Ecosystems.

5.2 General

All statements are terminated with a carriage return.

5.2.1 Value Assignment

The equals sign (=) is used to assign one value to another. The assignee is on the left of the operator; the value being assigned on the right.

5.2.2 Property Naming

All Property names are identical to the name used by the original model; for example from the OCF Temperature Resource the Property name "temperature" is used whereas when referred to the derived ecosystem then the semantically equivalent Property name is used.

The name of the OCF defined Property is prepended by the ecosystem designator "ocf" to avoid ambiguity (e.g. "ocf.step")

5.2.3 Range

The range on the OCF side is fixed.

5.2.4 Arrays

An array element is indicated by the use of square brackets "[]" with the index of the element contained therein, e.g. range [1]. All arrays start at an index of 0.

5.2.5 Default Mapping

There are cases where the specified mapping is not possible as one or more of the Properties being mapped is optional in the source model. In all such instances a default mapping is provided. (e.g. "transitiontime = 1")

5.2.6 Conditional Mapping

When a mapping is dependent on the meeting of other conditions then the syntax:

If "condition", then "mapping"

is applied.

E.g. if onoff = false, then ocf.value = false

5.2.7 Method Invocation

The invocation of a command from the derived ecosystem as part of the mapping from an OCF Resource is indicated by the use of a double colon "::" delimiter between the applicable resource, service, interface or other construct identifier and the command name. The command name always includes trailing parentheses which would include any parameters should they be passed.

6 EnOcean Translation

6.1 Operational Scenarios

The overall goal is to make EnOcean Devices appear as OCF Servers in a local network. Like in Figure 1 every EnOcean Device is represented as an EnOcean Shadow Device on the EnOcean Bridge Platform. An EnOcean Shadow Device contains the last values that have been sent over ERP from the real EnOcean device. Over the EnOcean Bridging Function each EnOcean Shadow Device shall be represented as a Virtual OCF Server. The EnOcean Bridging Function supports Asymmetric Server Bridging only since an EnOcean Device always will be represented as an OCF Server and not as an OCF Client.

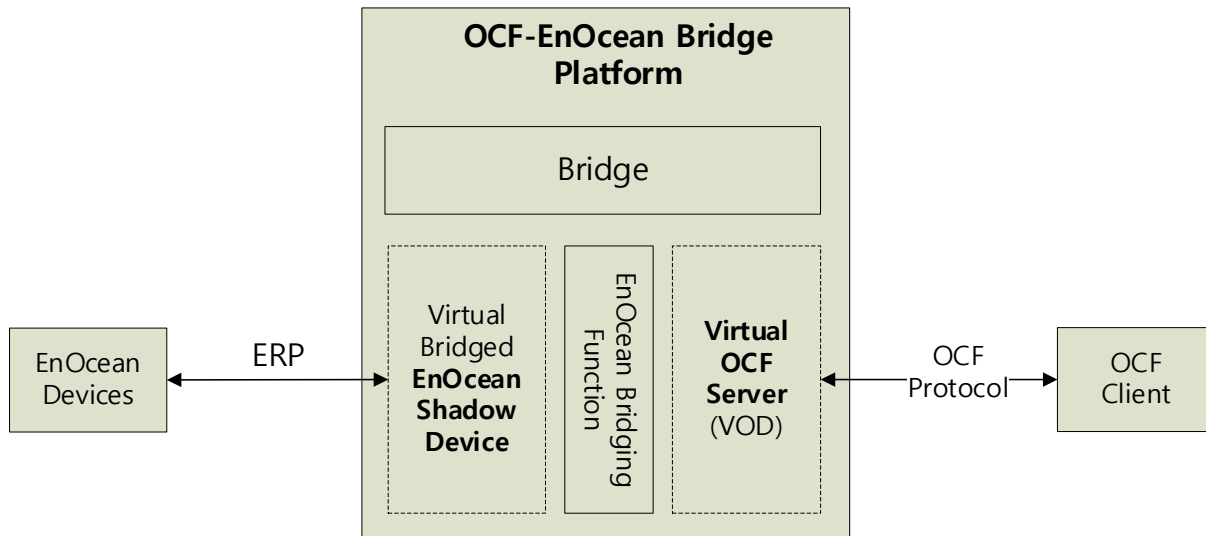

Figure 1– OCF EnOcean Bridge Platform and Components

6.1.1 Use case for EnOcean Bridging

In Figure 2 a use-case for EnOcean Bridging is shown. An EnOcean Bridge Platform which provides an EnOcean Device as an EnOcean Shadow Device can be retrieved by an OCF Client and used to trigger other OCF Devices over rules or just show the actual value of the EnOcean Shadow Device. The connection between the OCF Client and the EnOcean Bridge Platform could be every protocol OCF supports. For the communication between an actual EnOcean Device and the EnOcean Bridge Platform the ERP shall be used.

Figure 2 – Case for EnOcean Bridging

6.2 Requirements specific to EnOcean Bridging Function

6.2.1 Introduction

Each EnOcean Device specified in this document follows the EEP Specification 2.6.8 or higher and uses one telegram type to transmit data over the ERP. To identify a new EnOcean Device the EnOcean Teach-In information is required in the first EnOcean Telegram sent by the EnOcean Device to the EnOcean Bridge Platform.

The EnOcean Bridge Platform acts as an EnOcean Gateway/Transceiver in the ERP. It is responsible for Teaching-In new devices and keeping the EnOcean Shadow Devices updated with the real values from the EnOcean Devices. Through the EnOcean Bridging Function each EnOcean

Shadow Device will be translated, not the real devices directly, since they are commonly Energy Harvesting devices and can't communicate bi-directly.

6.2.2 Exposing EnOcean Devices to OCF Clients

6.2.2.1 General Requirements

Because the information structure of EnOcean Devices is different from OCF Devices and Resources a structure mapping is given by Table 1. An EnOcean Device will always be mapped as one OCF Device with one or multiple Resources.

Table 1 - Translation Rule between EnOcean Devices and OCF Data Models

From EnOcean	Mapping count	To OCF	Mapping count
EnOcean Device	1	OCF Device OCF Resource	1 1..n
EnOcean Telegram Parameter	1	OCF Resource Property	1..n

The Telegram Parameters of a Telegram sent by an EnOcean Device are mapped on Resource(s) and/or Resource Properties. The mapping count of Telegram Parameters on Resources and Resource Properties depends strongly on the individual EnOcean Device.

Table 2 - EnOcean to OCF Mapping Example

From EnOcean		To OCF	
EnOcean Device	A5-02-01 (Temperature Sensor)	OCF Device	oic.d.sensor
		OCF Resource	oic.r.temperature
EnOcean Telegram	Temperature value	OCF Resource Properties	temperature.value
Meta Information from EEP Spec	Unit (C)		temperature.unit
	Range (-40°C to 0°C)		temperature.range

In Table 2 a mapping example for a simple temperature sensor can be found. The type is identified by the EEP and the EnOcean Device is represented by a single OCF Device and one or more OCF Resources. The temperature value of the EnOcean Device is mapped into a temperature Resource and into the matching OCF Resource property "value". Meta Information provided by the EEP Spec can also be used as OCF Resource Properties. In this example the unit of the value and the range will be mapped into suitable Properties.

The EnOcean Bridging Function shall always follow the requirements in clause 8 to translate all EnOcean Devices and Telegram Parameters in OCF Devices, OCF Resources and Properties. It contains well-defined translation rules for each EnOcean Device. This kind of deep translation is the only way to represent EnOcean Devices as OCF Devices. On the fly translation is technically not possible and shall not be supported.

A Resource URI can be chosen freely since the Bridging Function knows all semantic information of the EnOcean Devices and the OCF Data Model. Maintaining the EnOcean Shadow Devices and how the translation rules will be realised is also implementation specific.

If received Telegrams on the EnOcean Bridge Platform are not readable because they are not following any well-defined EEP they shall be dropped and the EnOcean Bridge Platform may throw a warning message.

6.2.2.2 Translation for well-defined EEPs

If an EnOcean Device uses an EEP which is well-defined in clause 8 the EnOcean Bridging Function shall follow it to translate the Device and it's Telegram Parameters to an OCF Device, one or more OCF Resources and OCF Resource Properties.

EnOcean Device Name (EEP)	EnOcean Telegram Parameters	OCF Resource Type(s)	OCF Device Type	OCF Device Name
Push Button (F6-01-01)	Push Button Released Push Button Pressed	oic.r.button	oic.d.sensor	Generic Sensor

		used for any monetary transactions				
Region	r	Free form text Indicating the current region in which the device is located geographically. The free form text shall not start with a quote (").	N	(none)	(none)	N
Localized Names	ln	Human-friendly name of the Device, in one or more languages. This property is an array of objects where each object has a "language" field (containing an RFC 5646 language tag) and a "value" field containing the device name in the indicated language. If this property and the Device Name (n) property are both supported, the Device Name (n) value shall be included in this array.	N	(none)	(none)	N
Default Language	dl	The default language supported by the Device, specified as an RFC 5646 language tag. By default, clients can treat any string property as being in this language unless the property specifies otherwise.	N	(none)	(none)	N

6.2.3 Protocol Translation between EnOcean and OCF

6.2.3.1 EnOcean Behavior translated to OCF Actions

On the EnOcean side of the EnOcean Bridge Platform there are overall three different behaviours. A Translation from it to OCF Actions is given by Table 6.

Table 6 - EnOcean Behaviour translated to OCF

EnOcean Behaviour	OCF Action
Teach-In (EEP) new device	Create VOD and proper resources
Receiving Telegram of a Teached-In Device	Update Resource(s), notify observers
Deleting Device (by User)	Remove VOD and Resource(s)

Teaching-In a new device over a proper telegram results in a new virtual OCF Server and corresponding Resources. Depending on the EnOcean Device there may be already one or more real values from the EnOcean Device in the telegram which shall be used to initiate the Resource Properties. The new EnOcean Device will be saved as an EnOcean Shadow Device in a suitable data representation. If the Teach-In telegram contains an invalid EEP or an EEP which isn't specified yet it shall not be translated. If the EEP is vendor specific but may be mapped on existing specified EEPs a translation could be possible.

If a telegram of an EnOcean Device is received by the EnOcean Bridge Platform which is already Teached-In and maintained in the EnOcean Shadow Device List the belonging OCF Resources will be updated. If there are existing observers on the resource a notify to each observer will be executed. If the Device ID of the Telegram doesn't fit on any already Teached-In EnOcean device, it will be ignored.

Users have the possibility to delete Teached-In Devices. If an EnOcean Device will be deleted all corresponding Resources and the VOD shall be deleted as well.

6.2.3.2 OCF Actions and EnOcean Bridge results

In Table 7 the OCF actions are displayed with the corresponding EnOcean translation results. Each action has different effects on the Bridging Function.

Table 7 - OCF Actions translated to EnOcean

OCF Action	EnOcean Bridge Behaviour
Discovery	Answering with OCF Representation of all EnOcean Shadow Devices
Retrieve	Answering with OCF Representation of a Device or Resources of the EnOcean Shadow devices, not the actual EnOcean Device
Observe	Register on a resource of an EnOcean Shadow Device
Update	(Not supported yet)

Answering to an OCF Discovery will result in a representation of all EnOcean Shadow Devices which are Teached-In in the EnOcean Bridge Platform. The Bridging Function is following the proper translation rules for each individual device. This operation has no impact on the EnOcean Device directly.

A retrieve operation also will be processed through the Bridging Function with an EnOcean Shadow Device. It will deliver the last known value of the actual EnOcean Device, since these Devices mostly can't communicate bi-directly.

Observe Requests will be attached to the respective EnOcean Shadow Device. Each EnOcean Shadow Device contains a list of registered observers and will notify them if a new value from the proper EnOcean Device is received.

Since the EnOcean Device mapping list doesn't contain actuators yet update requests are not supported by the EnOcean Bridge Platform.

7 Device Type Mapping

7.1 Introduction

This clause contains the mappings from EnOcean EEPs to OCF Device Types and OCF Resource Types. Additionally, all different Telegram Parameters with corresponding OCF Resource(s) will be presented.

7.2 EnOcean Equipment Profiles to OCF Device Types and OCF Resource Types

All supported EEPs are represented as “oic.d.sensor” Devices. Actuators are currently not supported.

Table 8 - EnOcean to OCF Mapping Table

EnOcean Device Name (EEP)	EnOcean Telegram Parameters	OCF Resource Type(s)	OCF Device Type	OCF Device Name

--	---	--	--------------	----------------

7.3 Telegram Parameters

7.3.1 Push Button

A Push Button value in EnOcean only contains the information if a button is pressed or released. It is represented as an “oic.r.button” Resource which value is flipping from “false” to “true” or from “true” to “false” each time the value signals that the EnOcean Push Button has been pressed.

7.3.2 Rocker 1st Action

This Parameter is used in Rocker Buttons and contains the actual state of a Rocker Button and which Rocker has been pressed. Each Rocker is represented as an “oic.r.button” Resource. The current state of a Rocker changes the value of the matching OCF Resource (e.g. State AI – “true”, AO – “false”).

Rocker Buttons contain another Parameter called Rocker 2nd Action. This Parameter is not translated since it contains the same semantic information as Rocker 1st Action.

7.3.3 Key Card

A Key Card Parameter can represent two States. The first one indicates that a valid Card has been inserted. The second state describes that the Card has been taken out. It is represented as an “oic.r.keycardswitch” resource.

7.3.4 Alert Signals

Alarm Signal Parameters are simple On/Off Parameters. It contains the Information if an Alarm has been triggered or if everything seems fine (for example Smoke Alarm or Water Leakage). Depending on the semantic use of this field it is mapped on an “oic.r.sensor.smoke” or on an “oic.r.sensor.water” Resource. The semantic use of this Parameter is specified by the EEP.

7.3.5 Open/Closed

Single Input Contacts only transfer a Parameter which indicates that a Contact has been Open or Closed. This generic type can be used from many different EnOcean Devices. Since there is no other semantic information available the only suiting resource is the “oic.r.sensor.contact” Resource.

7.3.6 Temperature

A Temperature Parameter contains the actual temperature in an 8 bit or 10 bit resolution. The Unit and the Range are specified through the EEP. The “oic.r.temperature” Resource is used for translation of this Parameter. The standard Unit of this Parameter is “°C”.

7.3.7 Barometer

This Parameter contains a 10 bit value and is translated to an “oic.r.sensor.atmosphericpressure” Resource. The used Unit and Range are specified by the EEP. The standard Unit of this Parameter is “hPa”.

7.3.8 Illumination

The Illumination Parameter is used for the actual illuminance value. It normally uses an 8 bit resolution. Unit and Range are specified by the used EEP. The standard Unit of this Parameter is “lx”. It is mapped on an “oic.r.sensor.illuminance” Resource.

7.3.9 Humidity

This Parameter is used for humidity measurements and only contains the relative value in percent. The range on all EEPs which are using this field is 0 % to 100 %. It is mapped on an "oic.r.humidity" Resource.

7.3.10 PIR/Occupancy

The Parameter of the Passive Infrared Sensors for Motion Detection contains the Information if there has been a motion or not. The "oic.r.sensor.presence" is used for this field.

7.4 Indirect Parameters through EnOcean Equipment Profile

7.4.1 Introduction

In clause 8 some values of OCF Resources are already filled with semantic information. This information is given by the corresponding EEP of the EnOcean Device and is not changed during translation.

7.4.2 Range

EnOcean Devices with Parameters like Illumination, Temperature or other continuous value types have a specified range. This range is not transmitted over ERP and can only be acquired over the EEP. It consists of a min and a max value and can be mapped into the generic range of OCF Resources.

7.4.3 Unit

EnOcean Devices with Parameters like Illumination, Temperature or other continuous value types have a specified unit. This unit is not transmitted over ERP and can only be acquired over the EEP. It can be mapped as a unit into OCF Resources.

8 Detailed Mapping APIs

8.1 Introduction

This clause provides a Device Type mapping description (using JSON that aligns with the Derived Modelling syntax described in Derived Models for Interoperability between IoT Ecosystems) for all EnOcean EEPs and OCF Resources that are within scope.

8.2 Barometric Sensor EEP A5-05-01

8.2.1 Derived model

The derived model: "A5_05_01".

8.2.2 Property definition

Table 9 provides the detailed per Property mapping for "A5_05_01".

Table 9 – The Property mapping for "A5_05_01".

EnOcean Property name	OCF Resource	To OCF	From OCF
barometer	oic.r.sensor.atmosphericpressure	oic.r.sensor.atmosphericpressure.atmosphericPressure = barometeroic.r.sensor.atmosphericpressure.range = [500.0, 1150.0]	N/A

Table 10 provides the details of the Properties that are part of "A5_05_01".

727
